GRASS 7.4 (current stable version, [more...](#))
Current stable release, see [New Features74](#) and [GRASS GIS 7.4.0 announcement](#)
Long term release (LTS).

Binaries	Source code	Manuals
 GNU/Linux	See source code download page	■ User manuals
 MS-Windows	Download source code from SVN repository	■ Programmer's 7 manual
 Mac OSX	Release notes	■ Compiling source code

MS Windows users

Download the **OSGeo4W** installer from:

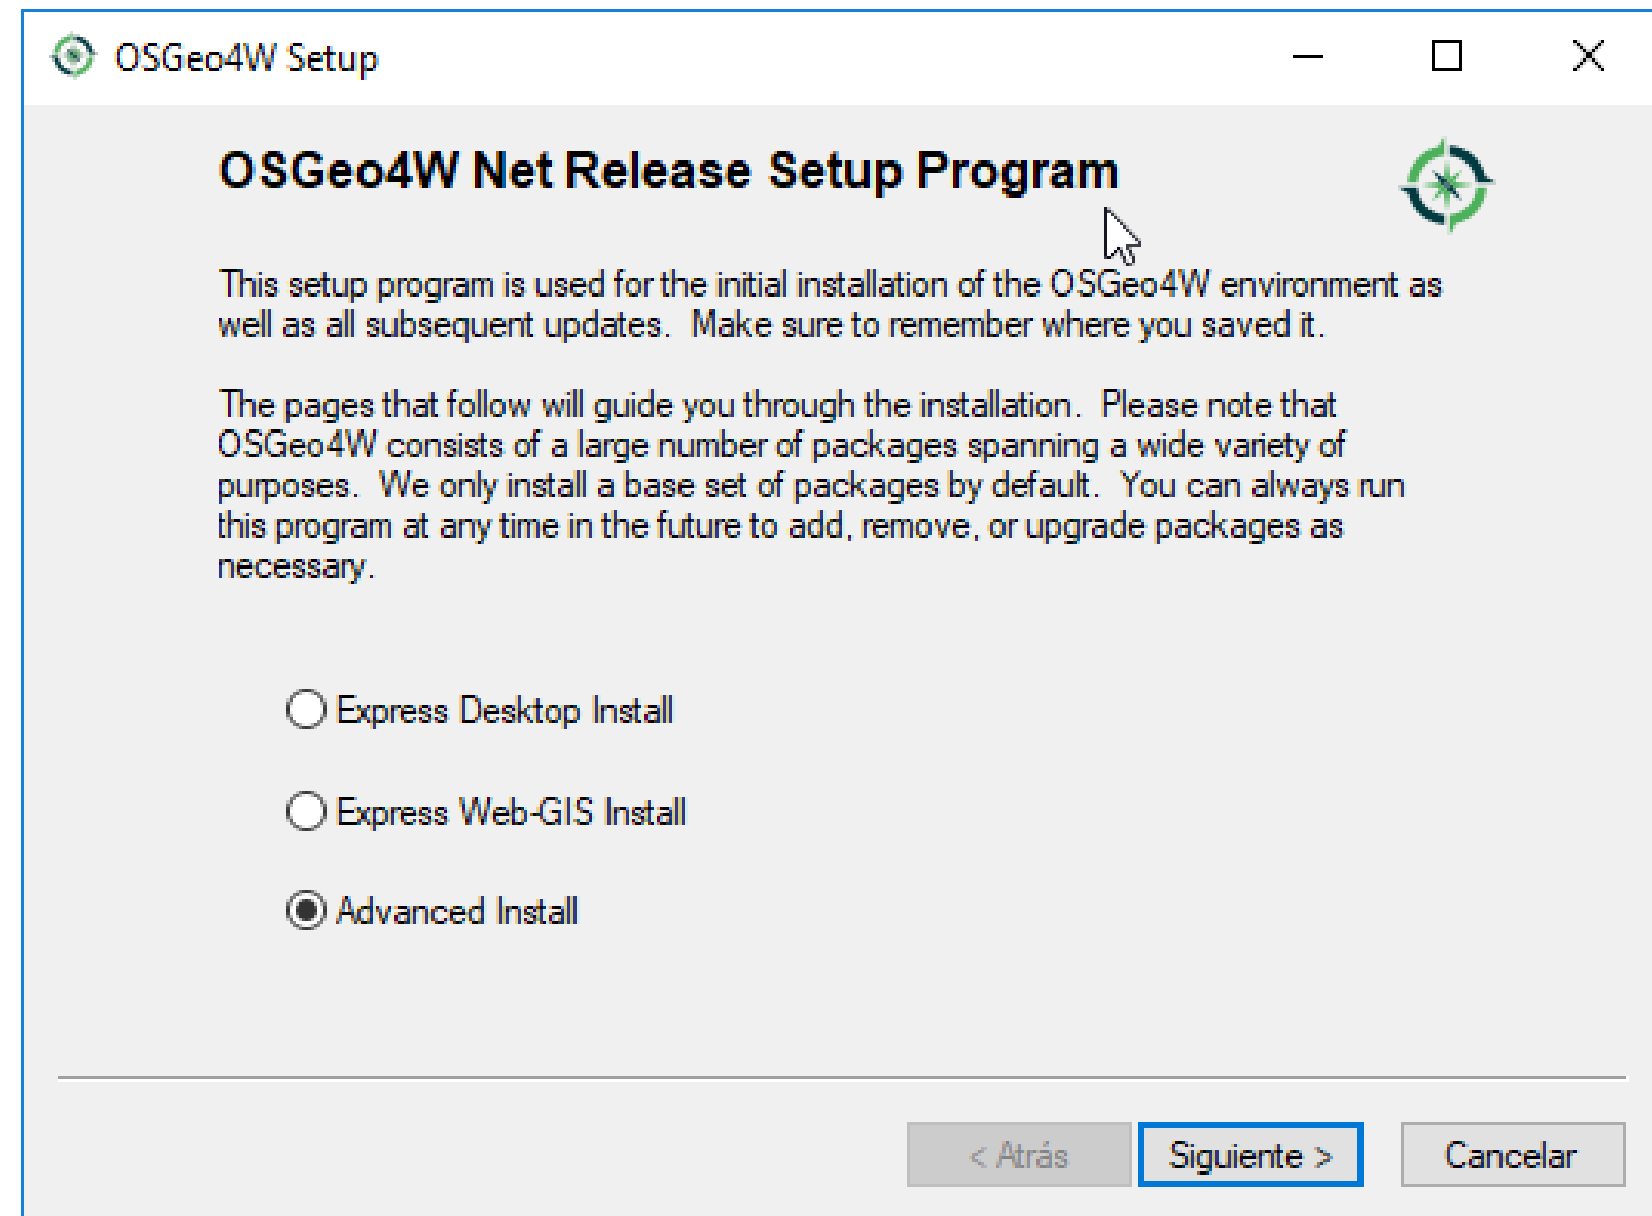

<https://trac.osgeo.org/osgeo4w>

*Important: Right-click over the installer and execute it with **Administrator** privileges*

- Select **Advance install**
- Select **Install from internet**
- Leave the "Install directory" set by default
- Choose *osgeo* server to download software from
- Under *Desktop applications*, select **GRASS GIS stable** and **QGIS desktop**
- Under *Lib*, select **qgis-grass-plugin7**, **matplotlib**, **python-pip**, **python-ply** and **python-pandas**
- Under *Command line utilities* select **msys**
- Wait for download and installation of packages, and done!

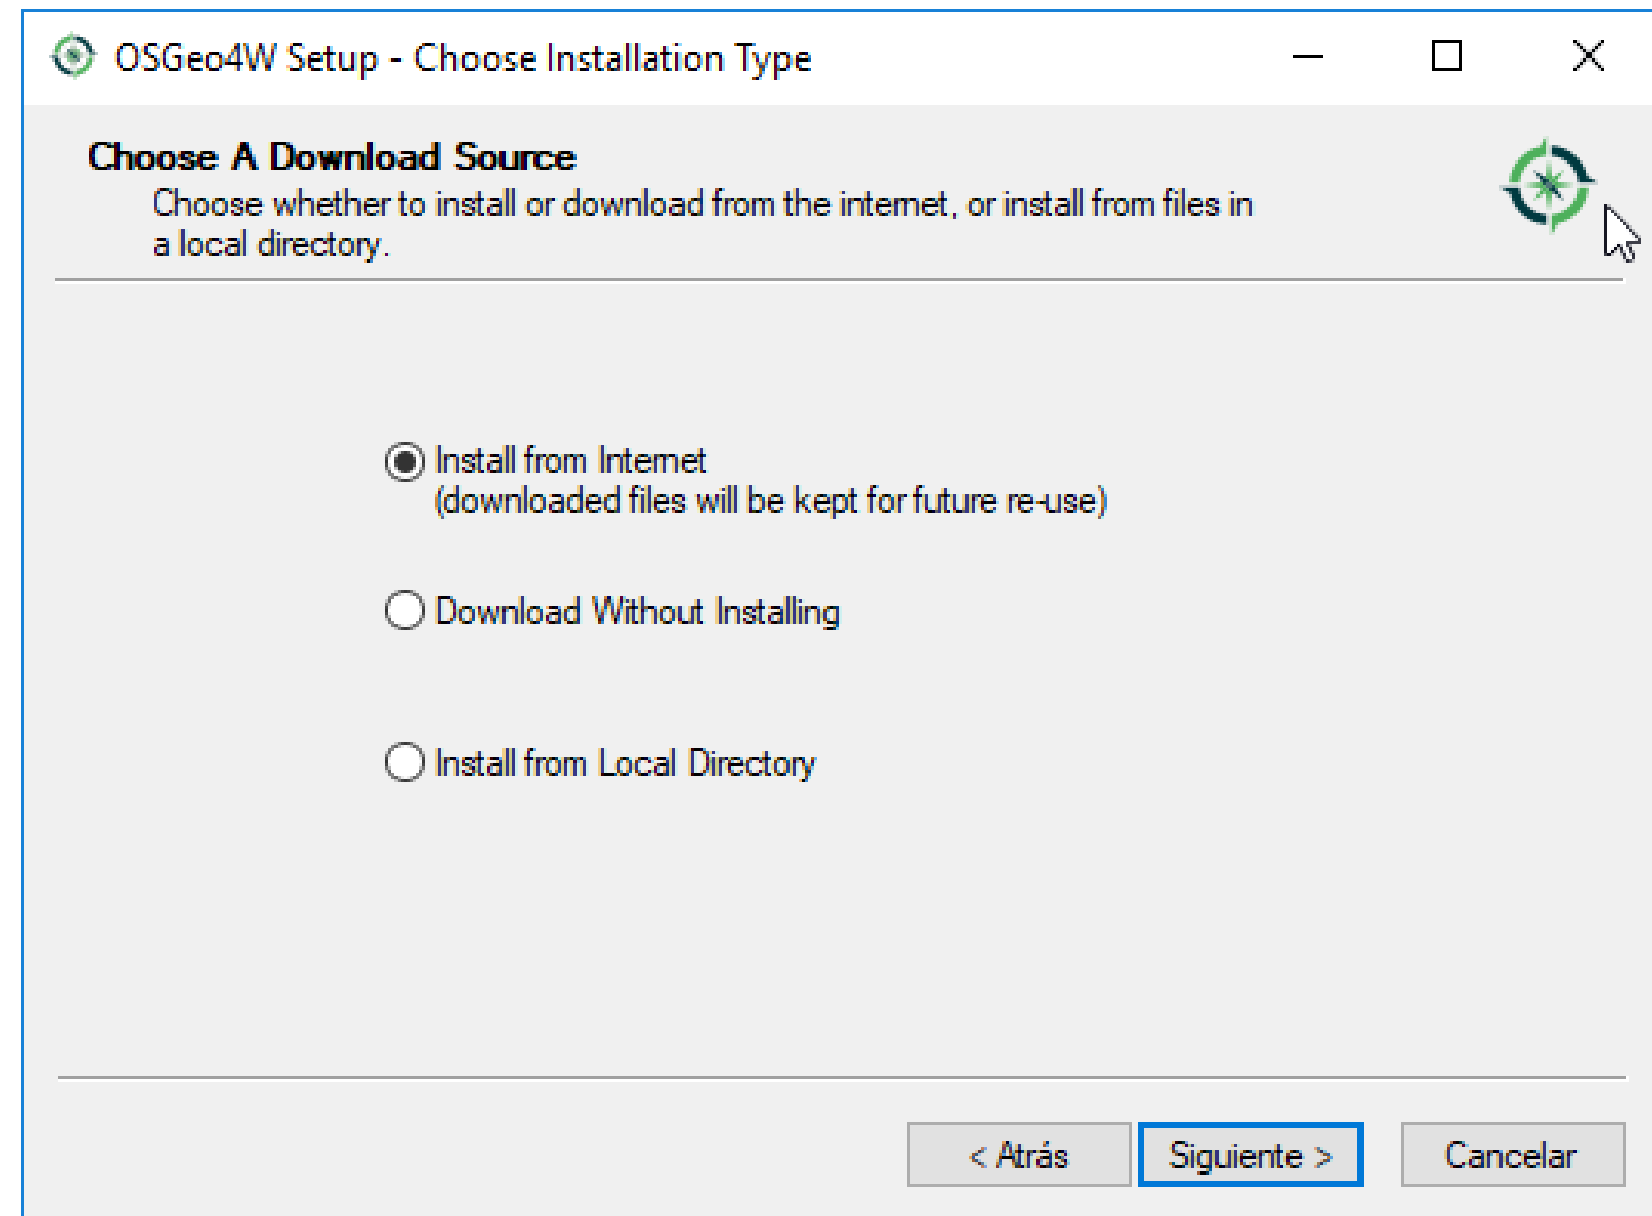

1.

Select Advance install

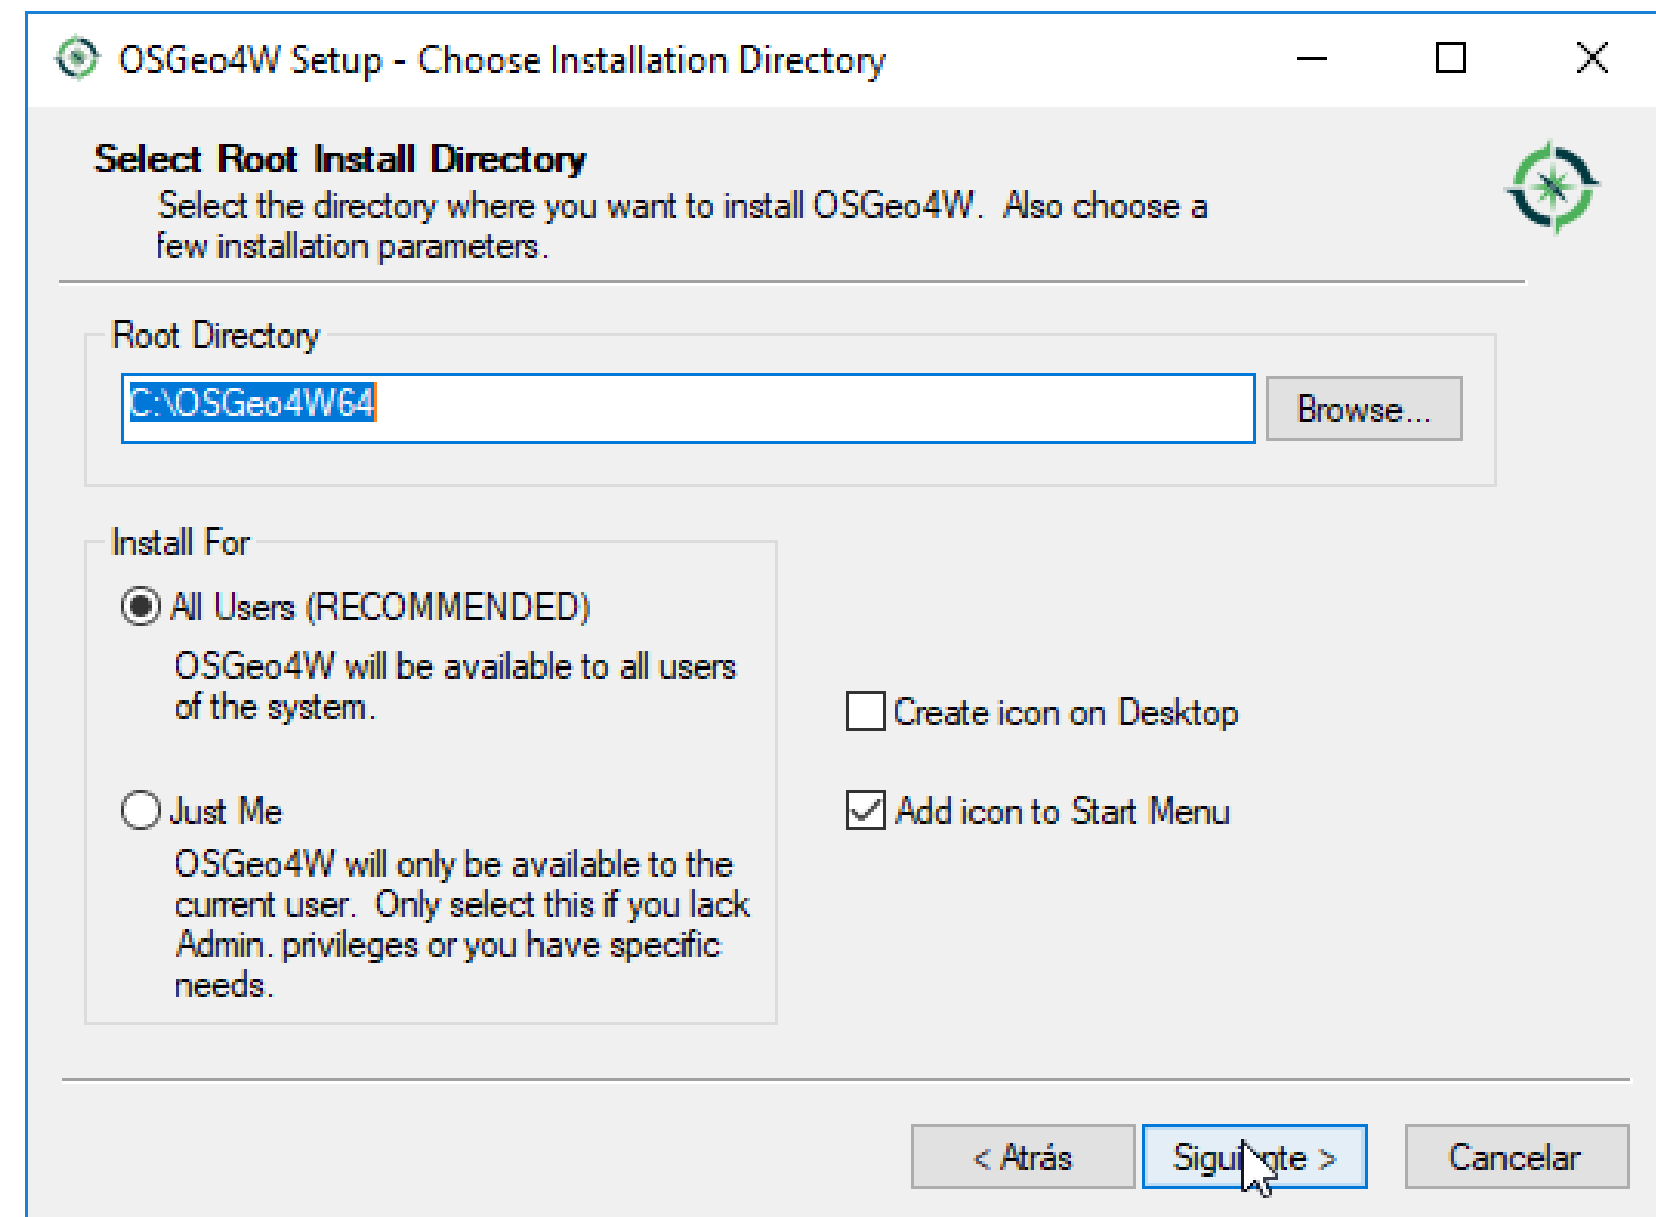

2.

Select Install from internet

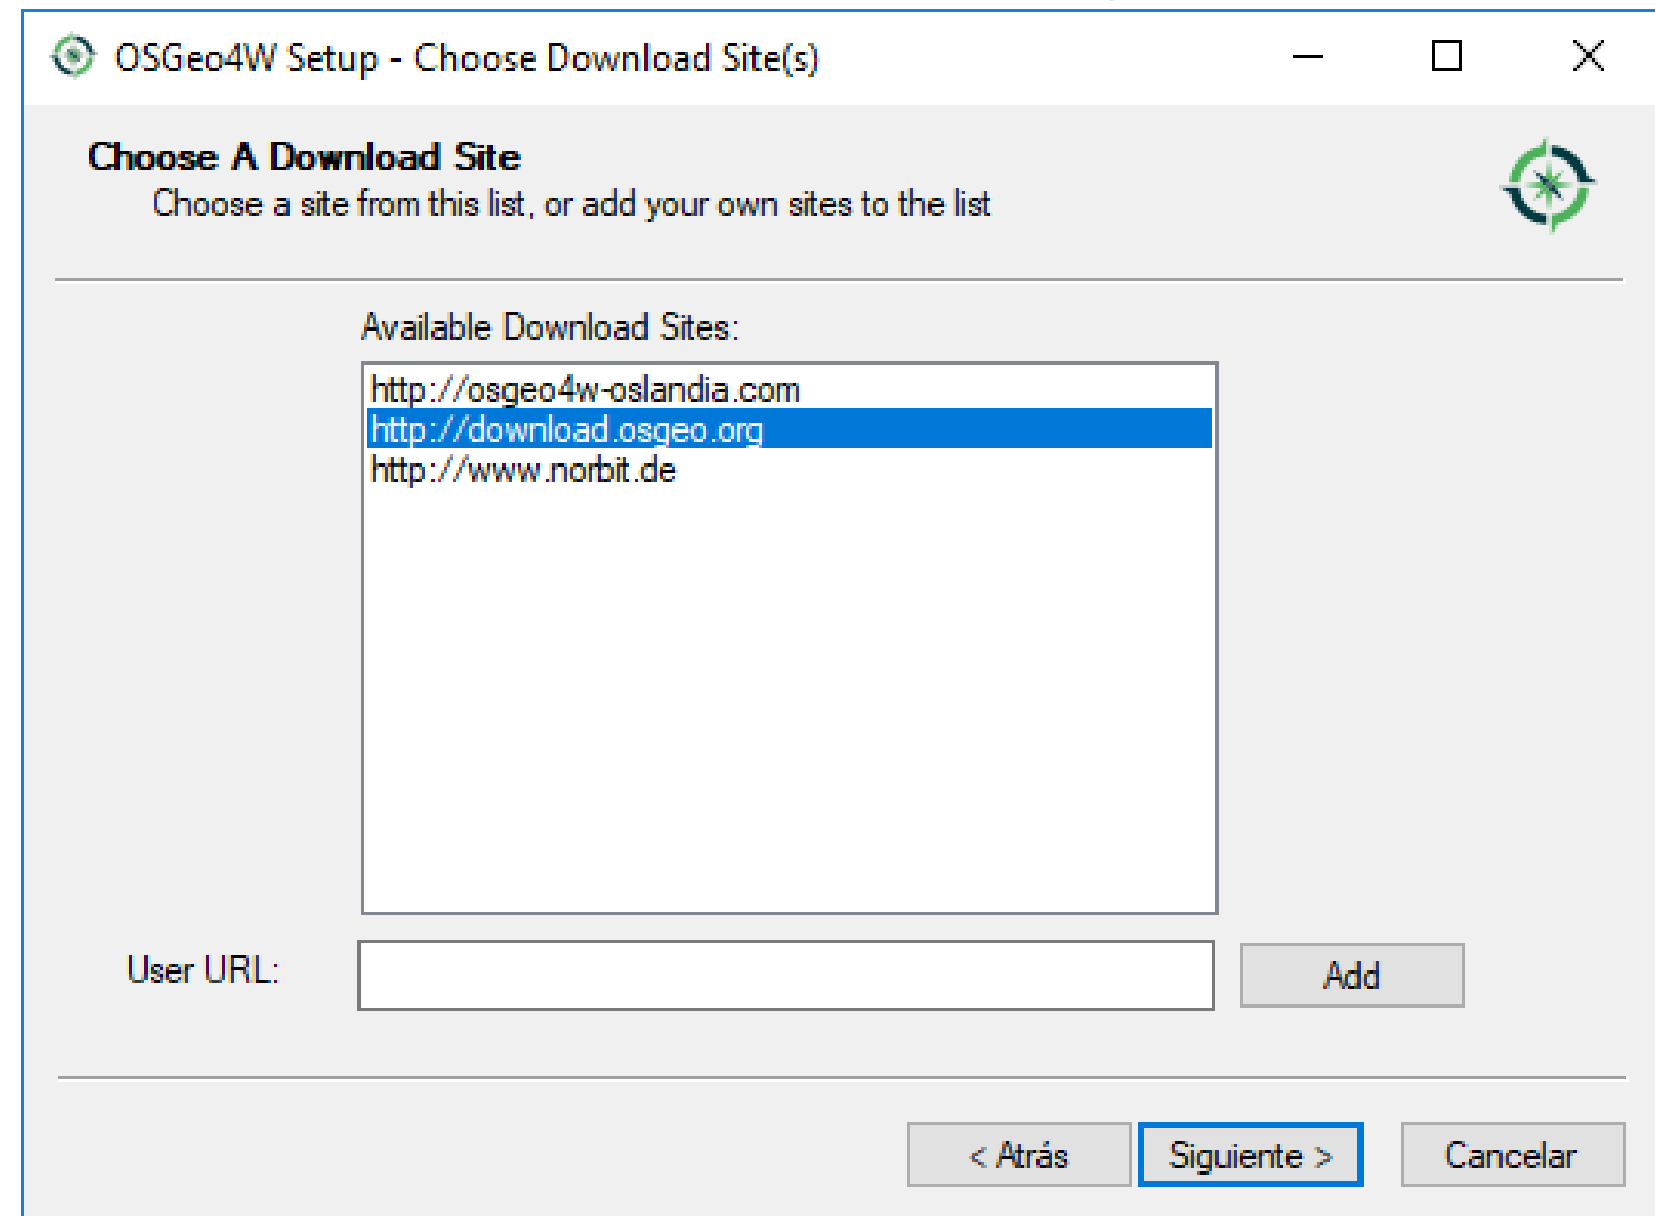

3.

Leave the "Install directory" set by default

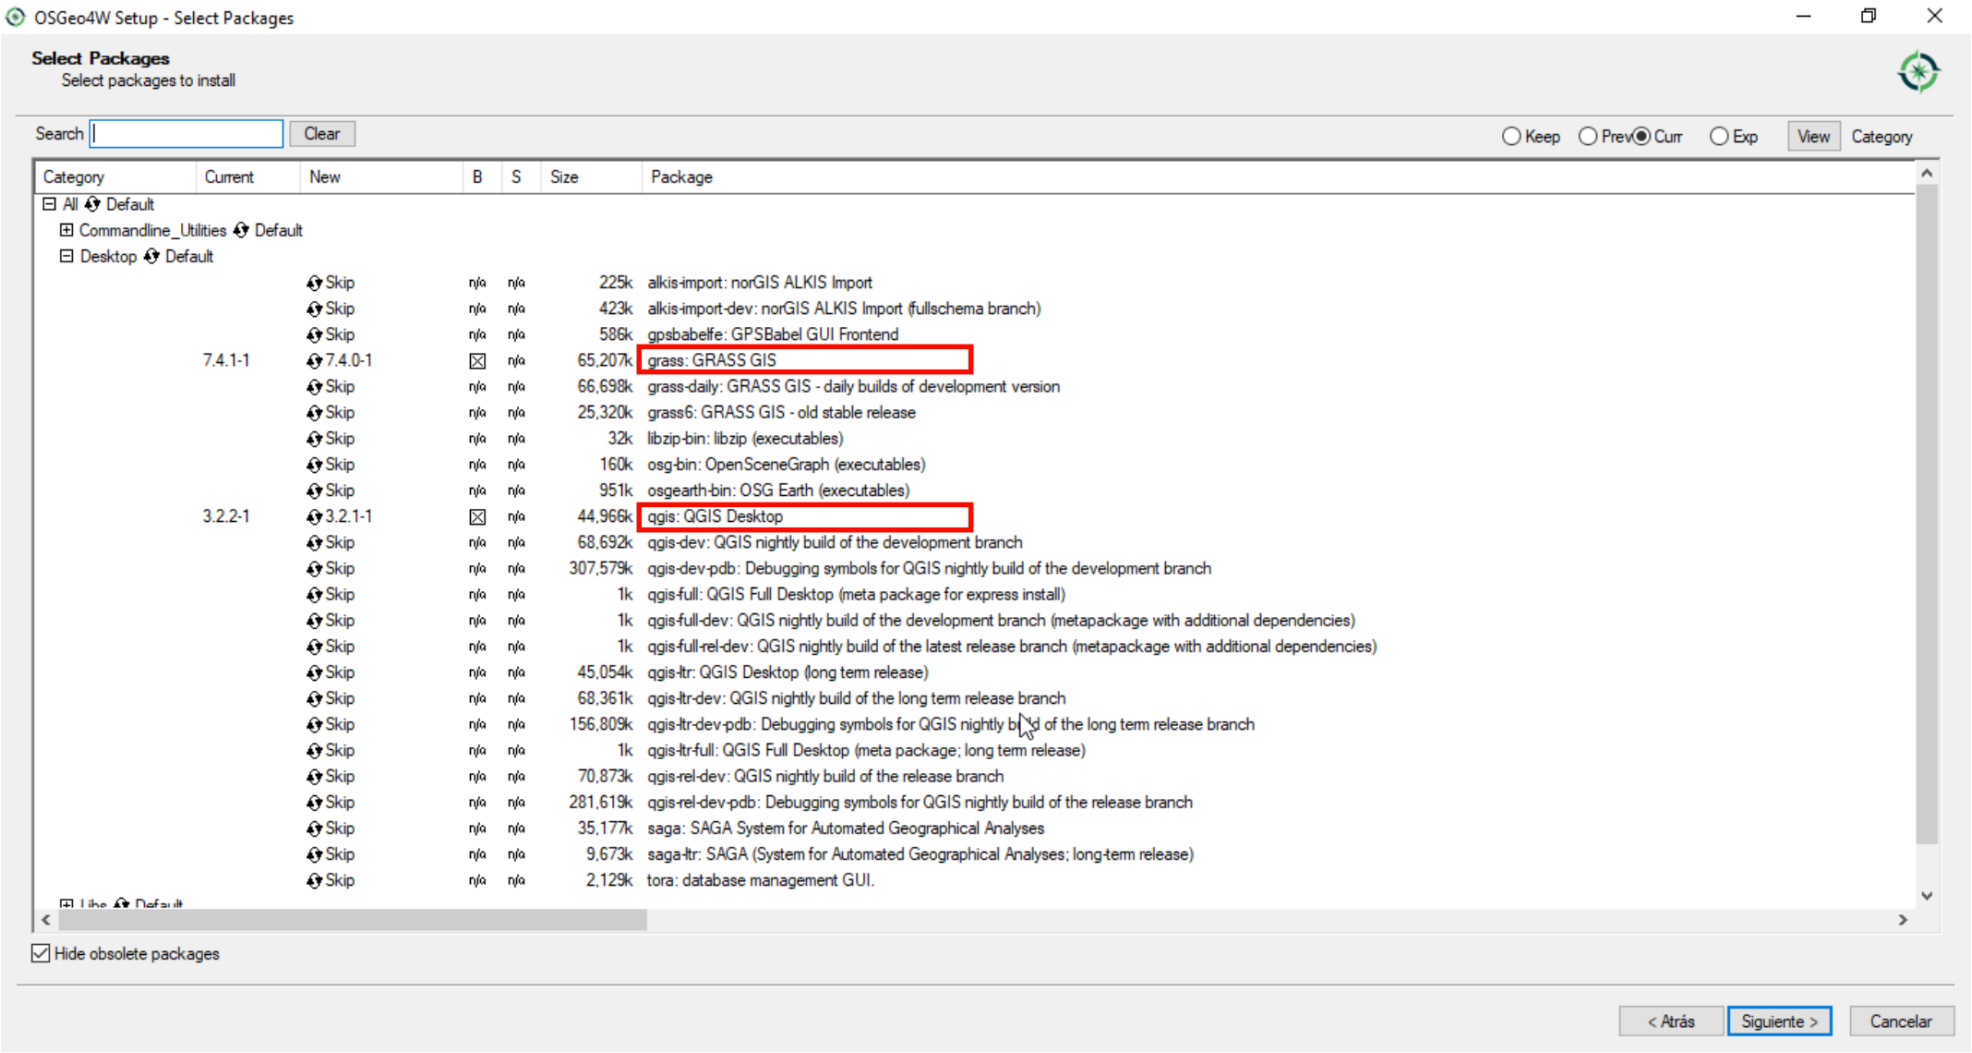

4.

Choose osgeo server

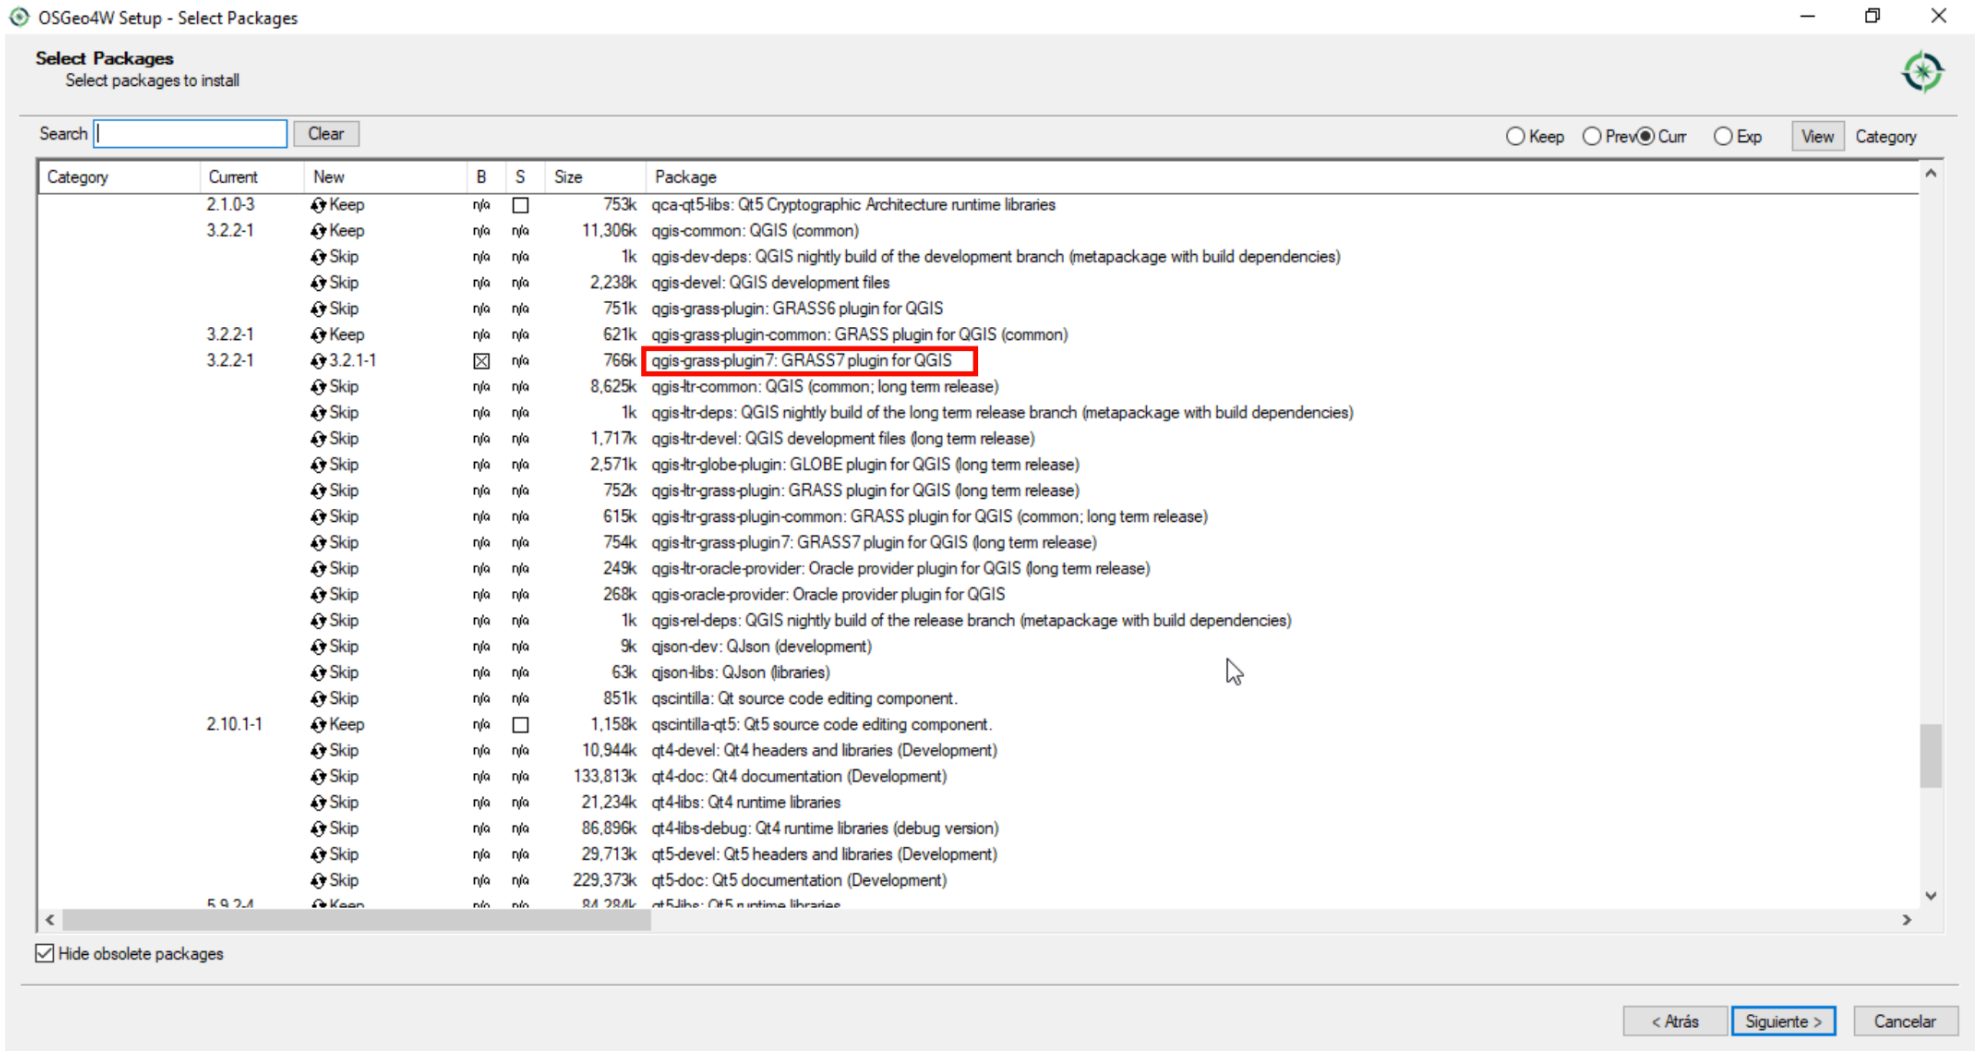

5.

Under *Desktop applications*, select
GRASS GIS and **QGIS desktop**

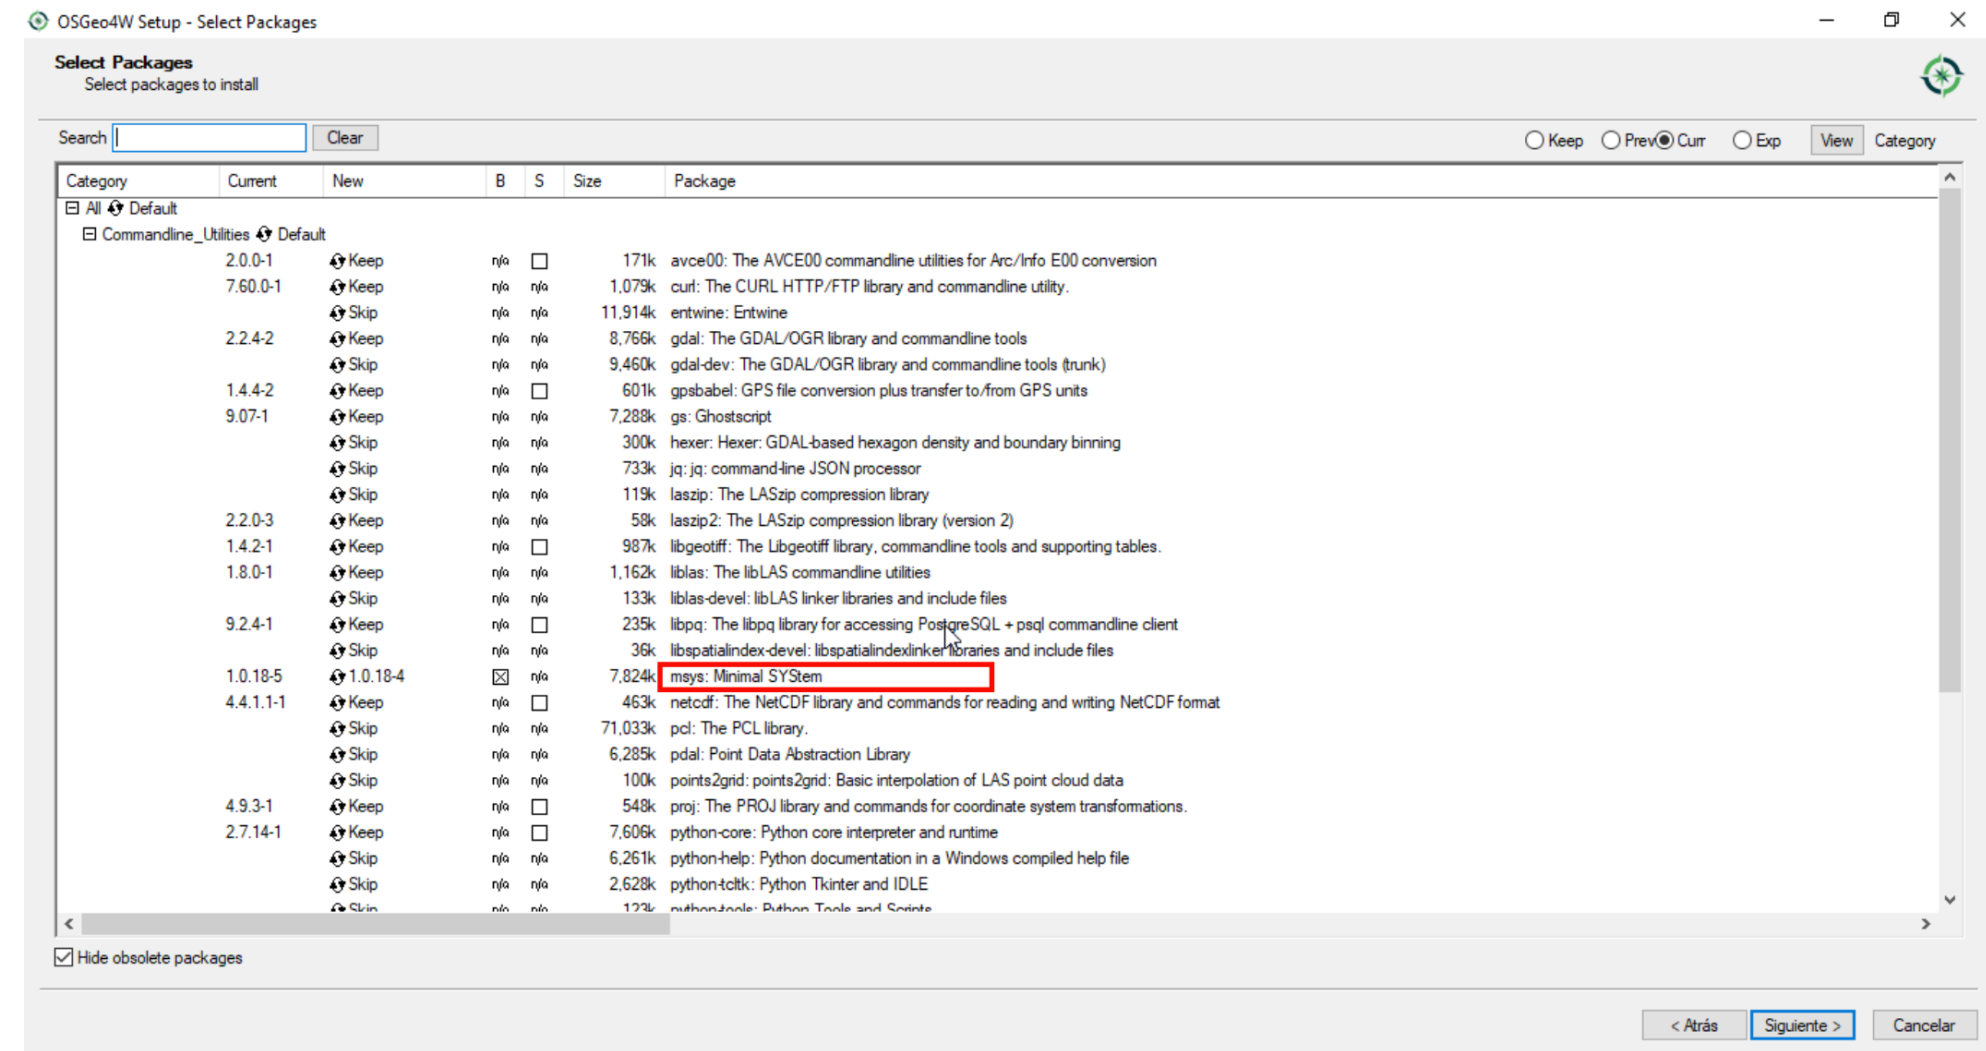

6.

Under *Lib*, select **qgis-grass-plugin7**,
matplotlib, **python-pip**, **python-ply**
and **python-pandas**

7.

Under *Command line utilities* select **msys**

Note: the installer will fetch all other needed dependencies for the applications selected

8.

Wait for download and installation,
and done :)

To update, just open the "OSGeo4W Setup" and start
again

Super easy!

Mac OS users

Download GRASS GIS 7.4.1 stable from:

<http://grassmac.wikidot.com/downloads>

and follow the instructions under *Installing GRASS for Mac*.

Linux users

- **Ubuntu:** Install GRASS GIS 7.4 from the "unstable" package repository

```
sudo add-apt-repository ppa:ubuntugis/ubuntugis-unstable  
sudo apt-get update  
sudo apt-get install grass
```

Linux users

- **Fedora:** Install GRASS GIS from the package manager

```
sudo dnf install grass
```

Other distros: <https://grass.osgeo.org/download/software/>

Other software we will use

Other software we will use

- **pymodis**: library to work with MODIS data. It offers bulk-download, mosaicking, reprojection, conversion from HDF format and extraction of data quality information. This library is needed by *i.modis* add-on.

Other software we will use

- **pymodis**: library to work with MODIS data. It offers bulk-download, mosaicking, reprojection, conversion from HDF format and extraction of data quality information. This library is needed by *i.modis* add-on.
- **sentinelSAT**: Utility to search and download Copernicus Sentinel satellite images from the **Copernicus Open Access Hub**. This library is needed by *i.sentinel* add-on.

Install pymodis and sentinelsat in Windows

- Open the **OSGeo4W shell** and run:

```
pip install setuptools  
pip install pymodis  
pip install sentinelsat
```

Install pymodis and sentinelsat in Mac and Linux

- Open a terminal and run

```
pip install setuptools  
pip install pymodis  
pip install sentinelsat
```

We are set, let's start!
